

# Shadowlands Cockpit Voice Records (by Rmax 2023)

## BASICS

This will start the audio recorder.

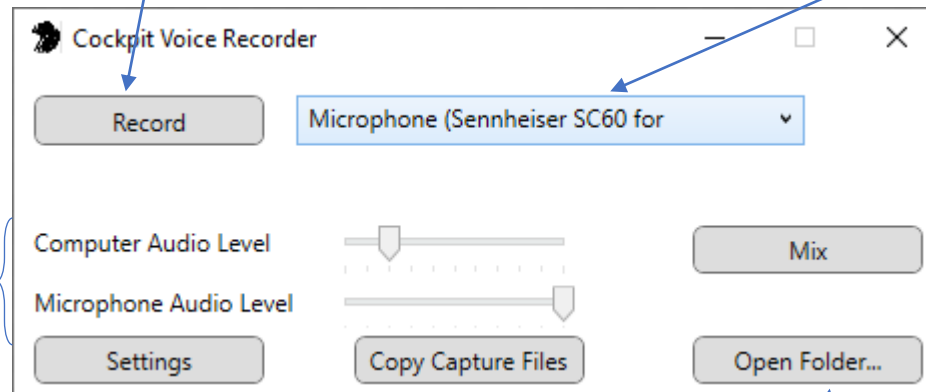

Two files will be created :  
*loopBackCaptureWav.wav* – this is the desktop audio  
*micCaptureWav.wav* – this is the microphone. There is no Push to talk, and it is always recording

Select active Microphone

The Microphone that will be used for recording output into the *micCaptureWav.wav* file

Adjusts input volumes for mixing only

This adjusts input volume for the mixed file when **Mix** is pressed (useful if there is a very loud desktop, and quiet Microphone")

Mixes The Desktop and Mic audio files into a single file

Once the recording is finished you can "mix" the audio tracks so both the desktop audio and your microphone sound will be in one file. The new file prefixed by CVR and has the date and time in the filename

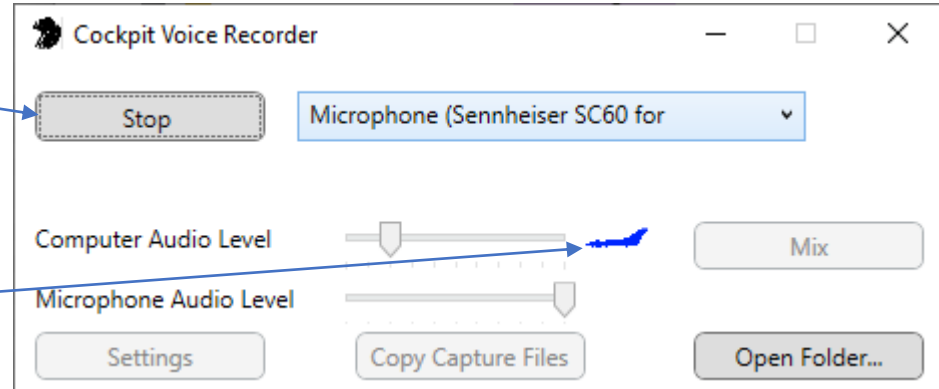

The *loopBackCaptureWav* and the *micCaptureWav* are automatically overwritten to save space. If you want to keep both copies of the file, this button will duplicate them.

Opens the folder where the audio files are stored. This is also where a log file is stored

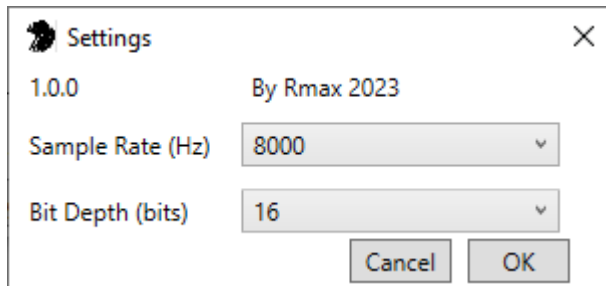

## Record Mode

This will stop the audio recorder.

The jets represent that data is being received by the input devices

## Advanced Settings

**The Higher the sample rate and Bit Depth, the better quality the sound is however at the expense of larger files.**

Lower numbers = lower quality and lower file size.

E.g. 44100Hz and 16 bit depth is CD quality

8000Hz 8 bit depth will be low quality (but small files)
